

TECHNICAL DATA SHEET

OsteoProCare with Chondroitin and Glucosamine has been carefully formulated to increase the bio-availability of dietary calcium and provide the other nutrients the body requires for optimum structural support.

This pleasant-tasting liquid preparation combines calcium orotate with 15 essential minerals (including four crucial minerals necessary for proper bone metabolism—zinc, magnesium, copper and manganese), 45 different trace minerals, Vitamin D3, Chondroitin and Glucosamine. These bone-and-joint building nutrients are suspended in a colloidal format that allows for optimum absorption.

Glucosamine Hydrochloride: Glucosamine is important in the manufacture of cartilage. The body manufactures glucosamine in small quantities. However, as we age that amount is decreased. The function of glucosamine in the body is to stimulate the production of glucosaminoglycans (GAGs), which are primarily structural components of cartilage. Glucosamine is therefore involved in the formation of ligaments, tendons, nails, skin, eyes, bones and heart valves.

Chondroitin Sulfate: Chondroitin Sulfate is a Glucosaminoglycan. It is composed of repeating units of glucosamine. Chondroitin Sulfate is taken up by cartilage and other joint structures. Once in the cartilage, it stimulates the production of more Chondroitin Sulfate.

SUGGESTED USE:

- For best results, this product should be taken with food.
- Shake product well before using. It does not need to be refrigerated.
- Begin with one tablespoon per day for the first three days and work up to taking one ounce per day by the seventh day.
- OsteoProCare should be taken during or after the evening meal.
